**An Agrarian Republic** Adam Wesley Dean 2015-02-16 The familiar story of the Civil War tells of a predominately agricultural South pitted against a rapidly industrializing North. However, Adam Wesley Dean argues that the Republican Party's political ideology was fundamentally agrarian. Believing that small farms owned by families for generations led to a model society, Republicans supported a northern agricultural ideal in opposition to southern plantation agriculture, which destroyed the land's productivity, required constant western expansion, and produced an elite landed gentry hostile to the Union. Dean shows how agrarian republicanism shaped the debate over slavery's expansion, spurred the creation of the Department of Agriculture and the passage of the Homestead Act, and laid the foundation for the development of the earliest nature parks. Spanning the long nineteenth century, Dean's study analyzes the changing debate over land development as it transitioned from focusing on the creation of a virtuous and orderly citizenry to being seen primarily as a "civilizing" mission. By showing Republicans as men and women with backgrounds in small farming, Dean unveils new connections between seemingly separate historical events, linking this era's views of natural and manmade environments with interpretations of slavery and land policy.

**The Green Menace** Jordan D. Marché II 2017-08-01 This volume is an account of the scientific and social responses made to the discovery of an invasive forest insect -- the emerald ash borer or EAB (*Agrilus planipennis* Fairmaire, 1888) -- in North America, that was formally announced in July 2002. Since its recognition, this wood-boring beetle has become one of the most destructive and costly exotic species ever encountered. More than \$300 million in federal USDA-APHIS funds (alone) have been devoted to battling this pest, which has killed some tens of millions of ash trees, chiefly within southeastern Michigan and surrounding states. EAB has now been found in 28 states and two Canadian provinces. But those numbers are almost certain to keep growing in coming years. While primarily a case study, this work nonetheless examines larger issues concerning invasive species as a whole, their inadvertent transport and worldwide spread through the rise of globalization, regulations that have been adopted to prevent their introduction, and the successes or failures of state and federal agencies to try and enforce those regulations. It offers the first general work of its kind to appear on the ash borer that is directed towards a broad audience including the public, entomologists and foresters, environmentalists and ecologists, researchers, regulators, and indeed anyone who wishes to learn more about this important and timely topic. No previous knowledge of EAB or invasion biology is assumed. This book covers all of the major aspects of scientific research and management that have occurred since EAB was recognized in 2002. It is thoroughly researched and draws from the best available data and sources, which represent (a) archival materials; (b) scholarly publications and conference proceedings; (c) interviews conducted with leading participants in the EAB program; (d) selected newspaper/magazine articles; and (e) reputable sources found on the Internet (e.g., USDA-APHIS).

**The Power Law** Sebastian Mallaby 2022-01-25 From an award-winning financial historian comes the gripping, character-driven story of venture capital and the world it made. Innovations rarely come from "experts." Jeff Bezos was not a bookseller; Elon Musk was not in the auto industry. When it comes to innovation, a legendary venture capitalist told Sebastian Mallaby, the future cannot be predicted, it can only be discovered. Most attempts at discovery fail, but a few succeed at such a scale that they more than make up for everything else. That extreme ratio of success and failure is the power law that drives venture capital, Silicon Valley, the tech sector, and, by extension, the world. Drawing on unprecedented access to the most celebrated venture capitalists of all time, award-winning financial historian Sebastian Mallaby tells the story of this strange tribe of financiers who have funded the world's most successful companies, from Google to SpaceX to Alibaba. With a riveting blend of storytelling and analysis, *The Power Law* makes sense of the seeming randomness of success in venture capital, an industry that relies, for good and ill, on gut instinct and personality rather than spreadsheets and data. We learn the unvarnished truth about some of the most iconic triumphs and infamous disasters in the history of tech, from the comedy of errors that was the birth of Apple to the venture funding that fostered hubris at WeWork and Uber to the industry's notorious lack of women and ethnic minorities. Now the power law echoes around the world: it has transformed China's digital economy beyond recognition, and London is one of the top cities for venture capital investment. By taking us so deeply into the VCs' game, *The Power Law* helps us think about our own future through their eyes.

**J-Curve Exposure** Pierre-Yves Mathonet 2008-07-31 Building on the success of the author's previous book *Beyond the J Curve: Managing a Portfolio of Venture Capital and Private Equity Funds*, this work covers new and additional material and offers advanced guidance on the practical questions faced by institutions when setting up and managing a successful private equity investment programme. Written from the practitioner's viewpoint, the book offers private equity and venture capital professionals an advanced guide that will make high return targets more realistic and sustainable. Factors that can sometimes cause institutions to shy away from venture capital are the industry's opaque track record, unclear valuations and risks, perceived

lack of transparency as well as the significant entry barriers to overcome before tangible results show. These issues are all addressed in details with practical solutions to the problems. Among other topics *J-Curve Exposure* includes discussions of: Experiences with the adoption of the International Private Equity and Venture Capital Valuation Guidelines to address fair value under IFRS. Approaches for splitting and prioritizing distributions from private equity funds. Techniques for track record analysis and other tools to help limited partners in their due diligence. Approaches to dealing with uncertainty, the relevance of real options, and co-investments and side funds as advanced portfolio management techniques. Questions related to limited partner decision making fallacies and how to manage portfolios of VC funds. Securitization backed by portfolios of investments in private equity funds. Real life case studies illustrate the issues relevant for the practitioner. *Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1954* 2004
