**Heating, Piping, and Air Conditioning** 1952 Vols. for May 1929-Dec. 1958 include the Journal  
of the American Society of Heating and Air-Conditioning Engineers (called in 1929-54 American  
Society of Heating and Ventilating Engineers) in "Journal section."

Shapo on the Law of Products Liability Marshall S. Shapo 2012-10-22 A proliferation of lawsuits  
involving sport utility vehicles, defective tires, medical devices and drugs, and asbestos abounds.  
Public attention to products liability cases is at an all-time high, and awards routinely run into the  
millions of dollars. When developing a strategy in this high stakes world, attorneys can't afford to  
have anything other than the best information and insight into this evolving area of law. Lawyers  
need practical tools to assess a products liability case's potential and build their approach, and  
Shapo on the Law of Products Liability provides the tools to give you the winning edge. Through a  
holistic analysis of the law and its principal developments as witnessed in hundreds of cases, this  
treatise gives litigators a wide variety of perspectives on potential strategies, and the tools to  
support those strategies with persuasive arguments. This authoritative two-volume work will  
enable you to: Assess products liability case potential and build sound litigation strategies Dig  
deep into products liability law to build creative approaches to litigation Craft a winning case and  
reap the greatest reward for your clients Find the tools and information to support strategies with  
persuasive arguments Both federal and state courts contribute a rich mix of decisions to products  
liability law, which covers both consumer products and occupational hazards. This indispensable  
resource for the products liability practitioner helps you prepare your case. Is the product  
defective? Who is liable? What is the manufacturer's responsibility? Who can be sued? What kind  
of awards may be realized? How might this be defended? Shapo on the Law of Products Liability  
also includes coverage of: Asbestos litigation Chinese drywall Food and drug Medical devices  
Design/manufacturing defects claims Punitive damages Discovery rule Up to date analysis and  
commentary History and background on products liability law Damages Advertising material  
Packaging Marshall S. Shapo, the Frederic P. Vose Professor at Northwestern University School of  
Law, is a nationally recognized authority on torts and products liability law.

Tropical Cool: A Buddhist Manual of Air Conditioning 2018-02-03 A case can be made that the  
extensive use of air conditioning use in the United States is an excess and poor example to the  
rest of the world that makes a mockery of the current ideology of energy sustainability including  
concerns about prevention of global warming. Extension of these wasteful practices to emerging  
economies (like India) is easily shown to be unsustainable. As with other recalcitrant problems  
such as over-reliance on cars and poor personal health and dietary habits the source of the  
problem is found individual moral choices that are championed as individual freedoms but  
actually representing degenerate morality which yields more benefit to corporations and big  
government. The Buddhist ethic provides one path into the heart of human choices illuminating as  
it does the "incorrect thinking" that underlies bad choices including those that most people think  
are based on common sense and scientific expertise. This book applies this idea to the matter of  
air conditioning, using Thailand and like Southeast Asian settings as an example. It claims that  
emerging western interest in "mindfulness" can be leveraged to introduce new thinking on  
personal energy use that will go much further to create true sustainability than programs based

on "harnessing" geophysical technologies such as solar and wind.

Principles of Heating, Ventilation, and Air Conditioning in Buildings John W. Mitchell 2012-03-06

Heating Ventilation and Air Conditioning by J. W. Mitchell and J. E. Braun provides foundational knowledge for the behavior and analysis of HVAC systems and related devices. The emphasis of this text is on the application of engineering principles that features tight integration of physical descriptions with a software program that allows performance to be directly calculated, with results that provide insight into actual behavior. Furthermore, the text offers more examples, end-of-chapter problems, and design projects that represent situations an engineer might face in practice and are selected to illustrate the complex and integrated nature of an HVAC system or piece of equipment.
