Symbolic Computing E. G. Rajan 2005 This book is a result of many years' research carried out with the purpose of evolving a logico-mathematical framework for symbolic computing. It gives a first time exposure to certain ideas and concepts related to non-numerical signal and image processing and provides certain latest technologies that may serve as a repertoire of tools that are of significant use in formulating DNA computing paradigms.

Een duister vermoeden Elizabeth George 2012-09-19 De machtige en invloedrijke Sir Bernard Fairclough roept inspecteur Thomas Lynleys hulp in bij het onderzoek naar zijn neef. Diens dood wordt afgedaan als een noodlottige verdrinking, en er is zo op het eerste gezicht niets dat anders doet vermoeden. Maar wanneer Lynley de hulp inroept van zijn vrienden Simon en Deborah St. James, wordt al gauw duidelijk dat het binnen de Fairclough-clan wemelt van de geheimen, leugens en motieven. Terwijl Deborah onderzoek doet naar de zoon van Sir Bernard, Nicholas Fairclough, raakt ze geïntrigeerd door Nicholas' beeldschone vrouw, met wie ze een uiterst sterke band voelt. Intussen graven Lynley en Simon naar informatie over de rest van de familie, onder wie de verbitterde ex-vrouw van het slachtoffer en de man voor wie hij haar verliet. Naarmate het onderzoek vordert, begint de positieve reputatie van de Faircloughs steeds meer deukjes te vertonen en dreigen het bedrog en de leugens iedereen in de familie te vernietigen... Elizabeth George besluit op haar zevende om schrijfster te worden. In 1988 verschijnt haar eerste boek Totdat de

dood ons scheidt, waarvoor ze vele internationale prijzen ontvangt. Het wordt een internationale bestseller, net als alle daaropvolgende boeken met inspecteur Linley en brigadier Havers in de hoofdrol. 'Met Thomas Linley en Barbara Havers creëerde Elizabeth George een speurdersduo dat een plaatsje verdient in de galerij van de grote Engelse detectives.' - De Telegraaf

Advanced Computing, Networking and Informatics- Volume 1 Malay Kumar Kundu 2014-05-26 Advanced Computing, Networking and Informatics are three distinct and mutually exclusive disciplines of knowledge with no apparent sharing/overlap among them. However, their convergence is observed in many real world applications, including cyber-security, internet banking, healthcare, sensor networks, cognitive radio, pervasive computing amidst many others. This two-volume proceedings explore the combined use of Advanced Computing and Informatics in the next generation wireless networks and security, signal and image processing, ontology and human-computer interfaces (HCI). The two volumes together include 148 scholarly papers, which have been accepted for presentation from over 640 submissions in the second International Conference on Advanced Computing, Networking and Informatics, 2014, held in Kolkata, India during June 24-26, 2014. The first volume includes innovative computing techniques and relevant research results in informatics with selective applications in pattern recognition, signal/image processing and HCI. The second volume on the other hand demonstrates the possible scope of the computing techniques and informatics in wireless communications, networking and security.

NUMERICAL METHODS - SIG SER VEERARAJAN 2007 Designed for the first course on Numerical Methods, this book provides a strong foundation on the subject by giving a wide range of methods that an engineering student encounters in real life. It follows a mathematical and computer-oriented approach facilitating problem solving. Features Mathematical and computer-oriented approach with algorithms, pseudocodes and programs in C with their test results. Unique first chapter introducing the cause and consequences of errors in computer arithmetic. Conclusion provided at the end of each chapter briefly describes the merits and demerits of each numerical method. 350 solved examples, 635 practice problems, 214 short answer questions and 38 computer-based solved examples.

Fundamentals of Mathematical Statistics Veerarajan 2017-02 This book contains a balanced coverage of both the theory and applications that helps the beginners acquire a thorough knowledge of the concepts of mathematical statistics offered to

the Arts, Science, Commerce and Engineering students. Key Features * Previous knowledge of the subject is not required. * Scope of the book is to provide an indepth understanding of the subject. * Exhaustive coverage of theoretical background. * Systematic arrangement and analytical presentation of the subject matter. * Solved examples with detailed explanation of the solution procedure. * Rich pedagogy includes * 435 worked examples that have been graded according to their difficulty. * 465 short answer questions. * 600 problems for practice. * Answers for all the analytical short answer and descriptive questions given at the end of each chapter. * 175 figures and tables.

Internet of Things and Connected Technologies Rajiv Misra 2021-05-29 This book presents the recent research adoption of a variety of enabling wireless communication technologies like RFID tags, BLE, ZigBee, etc., and embedded sensor and actuator nodes, and various protocols like CoAP, MQTT, DNS, etc., that has made Internet of things (IoT) to step out of its infancy to become smart things. Now, smart sensors can collaborate directly with the machine without human involvement to automate decision making or to control a task. Smart technologies including green electronics, green radios, fuzzy neural approaches, and intelligent signal processing techniques play important roles in the developments of the wearable healthcare systems. In the proceedings of 5th International Conference on Internet of Things and Connected Technologies (ICIoTCT), 2020, brought out research works on the advances in the Internet of things (IoT) and connected technologies (various protocols, standards, etc.). This conference aimed at providing a forum to discuss the recent advances in enabling technologies and applications for IoT.

ICASISSET 2020 Mahalingam Sundhararajan 2021-01-27 We are delighted to introduce the proceedings of the first edition of the 2020 European Alliance for Innovation (EAI) International Conference on Advanced Scientific Innovation in Science, Engineering and Technology. This conference has brought innovative academics, industrial experts researchers, developers and practitioners around the world in the field of Science, Engineering and Technology to a common forum. The technical program of ICASISSET 2020 consisted of 97 full papers, including 6 invited papers in oral presentation sessions at the main conference tracks. The conference tracks were: Innovative Computing, Advanced innovation technology in Communication, Industry automation, hydrogen hybrid machine, computing in medical applications, Image processing and Internet of Things (IoT) and application. Aside from the high-quality technical paper presentations, the technical program also featured two keynote speeches, one invited talk and two technical workshops. The two keynote speeches were Dr. Hoshang Kolivand, Senior Lecturer, Liverpool John moores University, United Kingdom and Dr. Sheldon Williamson from Canada Research Chair in Electric Energy Storage Systems for Transportation Electrification and Professor in the Department of Electrical, Computer and Software Engineering,

Ontario Tech University. The two workshops organized were in the topics of Machine learning and Industrial applications. The workshop aimed to gain insights into key challenges, understanding and design criteria of employing recent technologies to develop and implement computational techniques and applications.

Optical Remote Sensing of Ocean Hydrodynamics Victor Raizer 2019-03-04 Optical Remote Sensing is one of the main technologies used in sea surface monitoring. Optical Remote Sensing of Ocean Hydrodynamics investigates and demonstrates capabilities of optical remote sensing technology for enhanced observations and detection of ocean environments. It provides extensive knowledge of physical principles and capabilities of optical observations of the oceans at high spatial resolution, 1-4m, and on the observations of surface wave hydrodynamic processes. It also describes the implementation of spectral-statistical and fusion algorithms for analyses of multispectral optical databases and establishes physics-based criteria for detection of complex wave phenomena and hydrodynamic disturbances including assessment and management of optical databases. This book explains the physical principles of high-resolution optical imagery of the ocean surface, discusses for the first time the capabilities of observing hydrodynamic processes and events, and emphasizes the integration of optical measurements and enhanced data analysis. It also covers both the assessment and the interpretation of dynamic multispectral optical databases and includes applications for advanced studies and nonacoustic detection. This book is an invaluable resource for researches, industry professionals, engineers, and students working on cross-disciplinary problems in ocean hydrodynamics, optical remote sensing of the ocean and sea surface remote sensing. Readers in the fields of geosciences and remote sensing, applied physics, oceanography, satellite observation technology, and optical engineering will learn the theory and practice of optical interactions with the ocean.

Materiaalkunde Kenneth G. Budinski 2009 In *Materiaalkunde* komen alle belangrijke materialen die toegepast worden in werktuigbouwkundige constructies aan de orde, zoals metalen, kunststoffen en keramiek. Per materiaalgroep behandelen de auteurs: · de belangrijkste eigenschappen; · de manier van verwerking; · de beperkingen; · de belangrijkste keuzaspecten met betrekking tot constructies; · de manier van specificatie in een technische tekening of een ontwerp. De eerste editie van *Materiaalkunde* verscheen alweer dertig jaar geleden. In de tussentijd is het voortdurend aangepast aan de nieuwste ontwikkelingen en het mag dan ook met recht een klassieker genoemd worden.

PROB, STATS & RANDOM PROC 3E VEERARAJAN This book with the right blend of theory and applications is designed to provide a thorough knowledge on the basic concepts of Probability, Statistics and Random Variables offered to the undergraduate students of engineering. Addition of important topics as per the syllabi requirements is the basis of this revision. Features Detailed coverage of the topic on Statistical Measures of Central Tendency which includes Mean, Median and Mode. (Refer chapter number 4 on Statistical Averages.) Detailed coverage of topics like Dispersion, Skewness and Kurtosis and Moments of a Random Variable. (Refer chapter number 4 on Statistical Averages.) Introduction of the topic on Linear Correlation and Regression has been discussed in chapter number 4. The applications of Random Variables have been dealt with in detail in chapter like Test of Hypothesis, Queueing Theory and Design of Experiments. (Refer chapters 6, 9 and 10) Special Probability Distributions and their inter-relation has been explained with great clarity. Pedagogical Features : Solved Examples: 366

Numerical Questions: 1149 A total of 1555 questions in the book.

Advances in Intelligent Systems, Computer Science and Digital Economics Zhengbing Hu 2020-01-23 This book comprises high-quality, refereed research papers presented at the 2019 International Symposium on Computer Science, Digital Economy and Intelligent Systems (CSDEIS2019): The symposium, held in Moscow, Russia, on 4–6 October 2019, was organized jointly by Moscow State Technical University and the International Research Association of Modern Education and Computer Science. The book discusses the state of the art in areas such as computer science and its technological applications; intelligent systems and intellectual approaches; and digital economics and methodological approaches. It is an excellent reference resource for researchers, undergraduate and graduate students, engineers, and management practitioners interested in computer science and its applications in engineering and management.

Higher Engineering Mathematics Veerarajan 2015-11 This book caters to the requirements of postgraduate students of engineering. This book has simple and lucid presentations with a range of solved examples which enables the students to self-study and understand the topics with ease. The book has a methodical approach

towards problem solving and helps the students grasp the topics and solve the exercise problems with confidence. The answers for the exercise problems are given at the end of each chapter. Key Features: * Our book has good coverage of all the important concepts * Comprehensive coverage of all topics * Rich Pedagogy * 215 Worked Examples * 311 Descriptive Questions * 205 Short-answer Questions

NUMERICAL ANALYSIS Vinay Vachharajani 2018-06-01 Description:This book is Designed to serve as a text book for the undergraduate as well as post graduate students of Mathematics, Engineering, Computer Science.COVERAGE:Concept of numbers and their accuracy, binary and decimal number system, limitations of floating point representation.Concept of error and their types, propagation of errors through process graph.Iterative methods for finding the roots of algebraic and transcendental equations with their convergence, methods to solve the set of non-linear equations, methods to obtain complex roots.Concept of matrices, the direct and iterative methods to solve a system of linear algebraic equations.Finite differences, interpolation and extrapolation methods, cubic spline, concept of curve fitting.Differentiation and integration methods.Solution of ordinary and partial differential equations SALIENT FEATURES:Chapters include objectives, learning outcomes, multiple choice questions, exercises for practice and solutions.Programs are written in C Language for Numerical methods.Topics are explained with suitable examples.Arrangement (Logical order), clarity, detailed presentation and explanation of each topic with numerous solved and unsolved examples.Concise but lucid and student friendly presentation for derivation of formulas used in various numerical methods. Table Of Contents:Computer ArithmeticError Analysis Solution of Algebraic and Transcendental Equations Solution of System of Linear Equations and Eigen value Problems Finite Differences Interpolation Curve Fitting and Approximation Numerical Differentiation Numerical Integration Difference Equations Numerical Solution of Ordinary Differential Equations Numerical Solution of Partial Differential Equations Appendix - I Case Studies / Applications Appendix - II Synthetic Division Bibliography Index
