The Highway Capacity Manual: A Conceptual and Research

History Volume 2 Elena S. Prassas 2020-01-08 Since 1950, the Highway Capacity Manual has been a standard used in the planning, design, analysis, and operation of virtually any highway traffic facility in the United States. It has also been widely used around the globe and has inspired the development of similar manuals in other countries. This book is Volume II of a series on the conceptual and research origins of the methodologies found in the Highway Capacity Manual. It focuses on the most complex points in a traffic system: signalized and unsignalized intersections, and the concepts and methodologies developed over the years to model their operations. It also includes an overview of the fundamental concepts of capacity and level of service, particularly as applied to intersections. The historical roots of the manual and its contents are important to understanding

current methodologies, and improving them in the future. As such, this book is a valuable resource for current and future users of the Highway Capacity Manual, as well as researchers and developers involved in advancing the state-of-the-art in the field.

beginning of each chapter. Skeletal Radiography provides a good introduction to the medical terminology encountered in radiographic practice. Content has been expanded and updated to take into account the latest guidelines from the Royal College of Radiologists, changes in treatments and other medical knowledge. Some new projections have been added, others removed and a few (notably in the skull chapters) have been retained for historical interest.

Corporate Evaluation in the German Banking Sector Svend Reuse 2007-11-06 Svend Reuse's analysis of the theoretical status quo of corporate evaluation in the German banking sector shows that only the earnings value method, the equity approach and the multiplier method are useful in this context. The results of his empirical study demonstrate that many banks do not implement shareholder value in practice, but favour periodic variables for their management. Based on the results of the study, the author

theological understanding from a solid base of biblical scholarship.

Overview of Commentary

Organization

Introduction—covers issues pertaining to the whole book, including context, date, authorship, composition, interpretive issues, purpose, and theology. Each section of the commentary includes: Pericope

Bibliography—a helpful resource containing the most important works that pertain to each particular pericope.

Translation—the author’s own translation of the biblical text, reflecting the end result of exegesis and attending to Hebrew and Greek idiomatic usage of words, phrases, and tenses, yet in reasonably good English. Notes—the author’s notes to the translation that address any textual variants, grammatical forms, syntactical constructions, basic meanings of words, and problems of translation.

Form/Structure/Setting—a discussion of redaction, genre, sources, and tradition as they concern the origin of the pericope, its canonical form, and its relation to the biblical and extra-biblical contexts in order to illuminate the structure and character of the pericope.

Rhetorical or compositional features important to understanding the passage are also introduced here.

Comment—verse-by-verse interpretation of the text and dialogue with other interpreters, engaging with current opinion and scholarly research.

Explanation—brings together all the results of the discussion in previous sections to expose the meaning and intention of the text at several levels: (1) within the context of the book itself; (2) its meaning in the OT or NT; (3) its place in the entire canon; (4) theological relevance to broader OT or NT issues. General

Bibliography—occurring at the

end of each volume, this extensive bibliography contains all sources used anywhere in the commentary.

early 20th century and a key figure in the history of medicine. Besides his research activities and his dedicated scientific work, Osler's greatest contribution to the medical world has been the system of residency which he developed at the Johns Hopkins Hospital in Baltimore, thus introducing a new and deeply humanistic approach to the strictly scientific realm of traditional medicine. Harvey Cushing (1869-1939), a former student and close friend of Osler's and a pioneer of neurosurgery, has himself become an icon of modern medicine. He was one of the first physicians to use X-rays for diagnosing brain tumours and he developed revolutionary methods of blood pressure measurement. He also discovered Cushing's syndrome, the first autoimmune disease identified in a human being. This monumental biography earned him the Pulitzer Prize in 1926.

A Past Without Shadow Zohar Shavit 2005-02-22 *A Past Without Shadow* examines 50 years of German children's books in which the darkest horrors of the Third Reich have routinely remained hidden. The horrors of the Third Reich are systematically screened and filtered, allowing the darker, bleaker parts of history to escape illumination. Here Zohar Shavit explores 345 German books for children describing the Third Reich and the Holocaust, and finds a shocking distortion of the past: a recurrent narrative which suggests that the Germans

themselves had no hand in the suffering inflicted on the Jews. These books, Shavit argues, have created the false historical lesson that the real victims of Hitler's crimes were the German people themselves. First published to great acclaim in Hebrew and now available in English, this book is a wake-up call for anyone concerned about German children's literature and its responsibility to past and future.

Marcel Mauss 2016-01-08 *Classical Durkheimian Studies of Myth and the Sacred* presents English translations of several important essays, some never before translated, by members of the famous Annee sociologique group around Emile Durkheim. These works by Marcel Mauss, Henri Hubert, and Robert Hertz are key contributions to today's growing interest in and reinterpretation of Durkheimian thought on culture, religion, and symbolism. The central thrust in this new interpretive effort uses the Durkheimian theory of the sacred to understand the symbolism and meanings of cultural structures and narratives more generally. Engineering Materials Volume 2

D. R. H. Jones 2013-10-22

Materials are evolving faster today than at any time in history. As a consequence the engineer must be more aware of materials and their potential than ever

before. In comparing the properties of competing materials with precision involves an understanding of the basic properties of materials, how they are controlled by processing, formed, joined and finished and of the chain of reasoning that leads to a successful choice. This book will provide the reader with this understanding. Materials are grouped into four classes: Metals, Ceramics, Polymers and Composites, and each are examined in turn. The chapters are arranged in groups, with a group of chapters to describe each of the four classes of materials. Each group first of all introduces the major families of materials that go to make up each materials class. The main microstructural features of the class are then outlined and the reader is shown how to process or treat them to get the structures (properties) that are wanted. Each group of chapters is illustrated by Case Studies

designed to help the reader understand the basic material. This book has been written as a second level course for engineering students. It provides a concise introduction to the microstructures and processing of materials and shows how these are related to the properties required in engineering design. Unique approach to the subject World-renowned author team Improved layout and format

[Intangible Flow Theory in Economics](#) Tiago Cardao-Pito 2020-12-14 The dominant economic explanations of the 20th century are not comprehensive enough to describe the complexity of economy and society and their reliance on the biosphere. Intangible Flow Theory in Economics: Human Participation in Economic and Societal Production outlines a new theory that challenges both economics and the relativism conveyed in social constructivism, poststructuralism and postmodernism. To mainstream economics and Marxism, monetary flows transform us humans into commodities. To this new theory, flows of economic elements as physical goods or money are consummated by intangible flows that cannot yet be precisely appraised at an actual or approximate value, for instance,

20/21

Downloaded from
uittreksel-register.nl on

workflows, service flows, information flows or communicational flows. The theory suggests a systematic alternative to refute the human commodity framework and interrelated conjectures (e.g. human capital, human resources, human assets). Furthermore, it exhibits that economic and societal production is fully integrated on the biosphere. Conversely, contemporary relativism argues for the end of theory development, suspension of evidence and entrenchment of knowledge validity among local

systems (named as paradigms, epistememes, research programs, truth regimes or other terms). Thus, relativism tacitly supports dominant theories as the human commodity framework because it preventively sabotages the creation of new theoretical explanations. Disputing relativist theses, intangible flow theory demonstrates that innovative theoretical explanations remain possible. This book is of significant interest to students and scholars of political economy, economic sociology, organization, economics and social theory.
