Belgium and the Monarchy Herman van Goethem 2010 Tracing the fault lines that have led to the current uneasy relations between Belgium, Flanders, and Wallonia, this history shows how the monarchy in Belgium has changed with the times since the democratization of voting rights in 1893. The policies now confronting parliament, however, will be another serious test of the monarchy, according to this analysis. As the result of its growing regional economy since 1970, Flanders has made a bid to divide the country, and this discussion considers the possible breakup of Belgium from the perspective of the past—and then looks ahead at the implications for other countries in the European Union.

Practical Identity and Narrative Agency Kim Atkins 2010-08-27 The essays collected in this volume address a range of issues that arise when the focus of philosophical reflection on identity is shifted from metaphysical to practical and evaluative concerns. They also explore the usefulness of the notion of narrative for articulating and responding to these issues. The chapters, written by an outstanding roster of international scholars, address a range of complex philosophical issues concerning the relationship between practical and metaphysical identity, the embodied dimensions of the first-personal perspective, the kind of reflexive agency involved in the self-constitution of one's practical identity, the relationship between practical identity and normativity, and the temporal dimensions of identity and selfhood. In addressing these issues, contributors engage with debates in the literatures on personal identity, phenomenology, moral psychology, action theory, normative ethical theory, and feminist philosophy.

Synchronizing Science and Technology with Human Behaviour Ralf Brand 2010-09-23 A rare achievement, one of the first books to link technological and behavioural change to the sustainability agenda Charles Landry, author of *The Creative City* Any course interested in sustainable development in practice would benefit from the case studies here Dr Adrian Smith, SPRU Science and Technology Policy Research Unit, University of Sussex, UK Two disjointed voices can be identified in the prevailing sustainability discourse: one technology-focused, the other favouring behavioural solutions. This new, practical text bridges the gap in a 'co-evolutionary' framework, enabling more sustainable policies and projects to be developed. Arguing that technical and social realms are much more connected than most people concerned with sustainability tend to admit, the author has developed an innovative and integrated strategy that encourages planners, architects and politicians to work with end-users in 'co-designing' technologies and infrastructures that make socially desired behaviours more attractive. Having explained the nature of the problem, the author outlines key concepts and shared characteristics of co-evolutionary projects and anticipates possible criticisms. Through detailed analysis and diverse case studies, the reader is presented with a clear picture of a more holistic approach to planning sustainable cities and regions, which will be invaluable for students and professionals alike. This will be an invaluable textbook and planning tool suitable for students of science and technology studies (STS), regional policy and planning, and practitioners including city and regional planners, policy makers and consultants.

Characterization of Liquids, Nano- and Microparticulates, and Porous Bodies using Ultrasound Andrei S. Dukhin 2010-06-03 Two key words define the scope of this book: 'ultrasound' and 'colloids'. Historically, there has been little real communication between practitioners in these two fields. Although there is a large body of literature devoted to

ultrasound phenomenon in colloids, there is little recognition that such phenomena may be of real importance for both the development and applications of colloid science. On the other side, colloid scientists have not embraced acoustics as an important tool for characterizing colloids. The lack of any serious dialogue between these scientific fields is the biggest motivation behind this book. - Covers in detail this multidisciplinary field combining acoustics, electroacoustics, colloid science, analytical chemistry and rheology - Provides a bibliography with more than 1,000 references - Presents theories and their experimental verification, as well as analysis of the methods and hardware pertaining to applications such as pharmaceuticals, ceramics, and polymers

It better reflects a more conceptual and decision-making approach to the material. The authors follow a "macro- to micro-" strategy by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle. The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. This motivates accountants by grounding the discussion in the real world, showing them the relevance of the topics covered to their careers.
